United Kingdom

WRAP published a [guide](#) highlighting how companies can get ready for textiles EPR in the UK.

Also, WRAP [published](#) information on how they have worked with the UK policymaker, DEFRA, on textiles EPR.

United Kingdom

As requested by the UK Environment Secretary, WRAP convened with advisory committees from the UK supply chain to research how regulatory reform through an EPR system could reduce the environmental impact of packaging waste in the UK. More info [here](#).

Also, for the UK policymaker, DEFRA, WRAP [published a report](#) to outline the impacts of an enhanced material sampling regime to support the UK Packaging EPR system.

United Kingdom

WRAP's Head of EPR, Jordan Girling, serves as part of the Producer Responsibility SEG (Strategic Expert Group) for the UK's [Chartered Institution of Waste Management](#). As part of the SEG, Jordan provides technical expertise to CIWM and sector stakeholders on existing and potential producer responsibility frameworks and legislation for various waste streams in the UK.

United States of America / Europe / UK

WRAP delivered a packaging EPR training workshop for producers. The workshop discussed recent packaging EPR developments in USA, EU & UK, as well as the divergencies between the EPR systems in each of the three regions and how producers are expected to comply with the requirements in practice.

How can WRAP help?

Governments & Policymakers

Support the establishment of new EPR systems (e.g., new waste streams) or expansion of existing EPR systems (e.g., expansion of scope or coverage). Recommending efficient & effective EPR mechanisms tailored to national EPR systems & national markets.

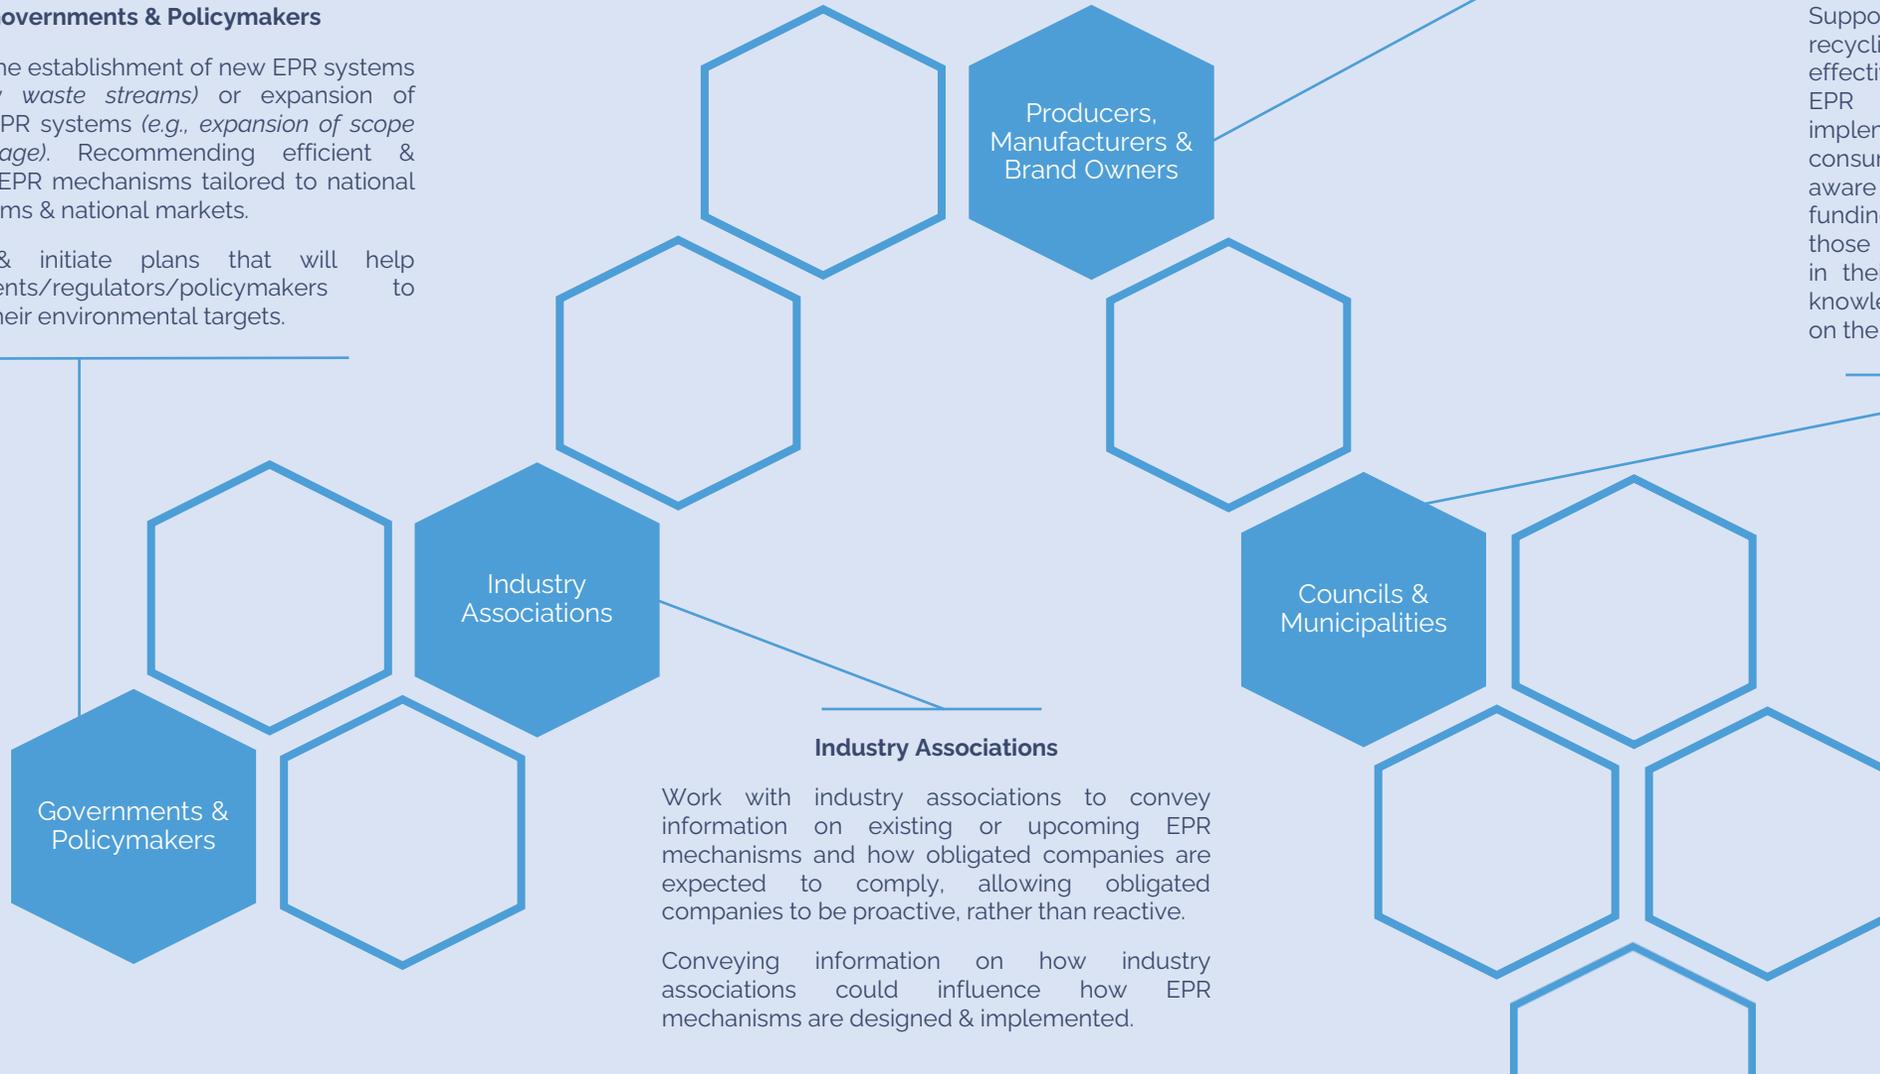

Design & initiate plans that will help governments/regulators/policymakers to achieve their environmental targets.

Producers, Manufacturers & Brand Owners

Help 'producers' to understand their EPR obligations in all regions where they operate, as well as their options for compliance and which compliance options are the most financially & administratively attractive.

Councils & Municipalities

Support with waste stream collection & recycling coordination. Support to effectively convey information about the EPR mechanisms that have been implemented in their regions to consumers. Thus, making consumers aware of what waste streams have pre-funding for collection & recycling and how those waste streams should be collected in their regions. The level of consumer knowledge / engagement has a big effect on the success of EPR systems.

Industry Associations

Industry Associations

Work with industry associations to convey information on existing or upcoming EPR mechanisms and how obligated companies are expected to comply, allowing obligated companies to be proactive, rather than reactive.

Conveying information on how industry associations could influence how EPR mechanisms are designed & implemented.

Councils & Municipalities

How can WRAP help?
